1	Historical Introduction	4
1.1	Relativistic Wave Mechanics	4
1.2	The Birth of Quantum Field Theory	4
1.3	The Problem of Infinities	4
	Bibliography	4
	References	4
2	Relativistic Quantum Mechanics	5
2.1	Quantum Mechanics	5
2.2	Symmetries	5
2.3	Quantum Lorentz Transformations	5
2.4	The Poincaré Algebra	5
2.5	One-Particle States	5
2.6	Space Inversion and Time-Reversal	5
2.7	Projective Representations*	5
	Appendix A: The Symmetry Representation Theorem	5
	Appendix B: Group Operators and Homotopy Classes	5
	Appendix C: Inversions and Degenerate Multiplets	5
	Problems	5
	References	5
3	Scattering Theory	6
3.1	‘In’ and ‘Out’ States	6
3.2	The S -Matrix	6
3.3	Symmetries of the S -Matrix	6
3.4	Rates and Cross-Sections	6
3.5	Perturbation Theory	6
3.6	Implications of Unitarity	6
3.7	Partial-Wave Expansions*	6
3.8	Resonances*	6
	Problems	6
	References	6
4	The Cluster Decomposition Principle	7
4.1	Bosons and Fermions	7
4.2	Creation and Annihilation Operators	7
4.3	Cluster Decomposition and Connected Amplitudes	7
4.4	Structure of the Interaction	7
	Problems	7
	References	7

5	Quantum Fields and Antiparticles	8
5.1	Free Fields	8
5.2	Causal Scalar Fields	8
5.3	Causal Vector Fields	8
5.4	The Dirac Formalism	8
5.5	Causal Dirac Fields	8
5.6	General Irreducible Representations of the Homogeneous Lorentz Group*	8
5.7	General Causal Fields*	8
5.8	The CPT Theorem	8
5.9	Massless Particle Fields	8
	Problems	8
	References	8
6	The Feynman Rules	9
6.1	Derivation of the Rules	9
6.2	Calculation of the Propagator	9
6.3	Momentum Space Rules	9
6.4	Off the Mass Shell	9
	Problems	9
	References	9
7	The Canonical Formalism	10
7.1	Canonical Variables	10
7.2	The Lagrangian Formalism	10
7.3	Global Symmetries	10
7.4	Lorentz Invariance	10
7.5	Transition to Interaction Picture: Examples	10
7.6	Constraints and Dirac Brackets	10
7.7	Field Redefinitions and Redundant Couplings*	10
	Appendix: Dirac Brackets from Canonical Commutators	10
	Problems	10
	References	10
8	Electrodynamics	11
8.1	Gauge Invariance	11
8.2	Constraints and Gauge Conditions	11

2 Relativistic Quantum Mechanics

2.1 Quantum Mechanics

2.2 Symmetries

2.3 Quantum Lorentz Transformations

2.4 The Poincaré Algebra

2.5 One-Particle States

2.6 Space Inversion and Time-Reversal

2.7 Projective Representations*

Appendix A The Symmetry Representation Theorem

Appendix B Group Operators and Homotopy Classes

Appendix C Inversions and Degenerate Multiplets

Problems

References

3 Scattering Theory

3.1 'In' and 'Out' States

3.2 The S -Matrix

3.3 Symmetries of the S -Matrix

3.4 Rates and Cross-Sections

3.5 Perturbation Theory

3.6 Implications of Unitarity

3.7 Partial-Wave Expansions^{*}

3.8 Resonances^{*}

Problems

References
