

VOLUME II: MODERN APPLICATIONS

The Quantum Theory of Fields

Steven Weinberg

University of Texas at Austin

ABSTRACT: Weinberg's QFT, typeset in nicer notation. Typesetting done entirely by coding agents, namely GPT 5.6. Figures done by Fable 5. Enjoy!

Contents

Preface to Volume II	2
Notation	3
15 Non-Abelian Gauge Theories	4
15.1 Gauge Invariance	4
15.2 Gauge Theory Lagrangians and Simple Lie Groups	4
15.3 Field Equations and Conservation Laws	4
15.4 Quantization	4
15.5 The De Witt–Faddeev–Popov Method	4
15.6 Ghosts	4
15.7 BRST Symmetry	4
15.8 Generalizations of BRST Symmetry*	4
15.9 The Batalin–Vilkovisky Formalism*	4
Appendix A: A Theorem Regarding Lie Algebras	4
Appendix B: The Cartan Catalog	4
Problems	4
References	4
16 External Field Methods	5
16.1 The Quantum Effective Action	5
16.2 Calculation of the Effective Potential	5
16.3 Energy Interpretation	5
16.4 Symmetries of the Effective Action	5
Problems	5
References	5
17 Renormalization of Gauge Theories	6
17.1 The Zinn–Justin Equation	6
17.2 Renormalization: Direct Analysis	6
17.3 Renormalization: General Gauge Theories*	6
17.4 Background Field Gauge	6
17.5 A One–Loop Calculation in Background Field Gauge	6
Problems	6
References	6
18 Renormalization Group Methods	7
18.1 Where do the Large Logarithms Come From?	7
18.2 The Sliding Scale	7
18.3 Varieties of Asymptotic Behavior	7
18.4 Multiple Couplings and Mass Effects	7
18.5 Critical Phenomena*	7

18.6	Minimal Subtraction	7
18.7	Quantum Chromodynamics	7
18.8	Improved Perturbation Theory*	7
	Problems	7
	References	7
19	Spontaneously Broken Global Symmetries	8
19.1	Degenerate Vacua	8
19.2	Goldstone Bosons	8
19.3	Spontaneously Broken Approximate Symmetries	8
19.4	Pions as Goldstone Bosons	8
19.5	Effective Field Theories: Pions and Nucleons	8
19.6	Effective Field Theories: General Broken Symmetries	8
19.7	Effective Field Theories: $SU(3) \cdot SU(3)$	8
19.8	Anomalous Terms in Effective Field Theories*	8
19.9	Unbroken Symmetries	8
19.10	The $U(1)$ Problem	8
	Problems	8
	References	8
20	Operator Product Expansions	9
20.1	The Expansion: Description and Derivation	9
20.2	Momentum Flow*	9
20.3	Renormalization Group Equations for Coefficient Functions	9
20.4	Symmetry Properties of Coefficient Functions	9
20.5	Spectral Function Sum Rules	9
20.6	Deep Inelastic Scattering	9
20.7	Renormalons*	9
	Appendix: Momentum Flow: The General Case	9
	Problems	9
	References	9
21	Spontaneously Broken Gauge Symmetries	10
21.1	Unitarity Gauge	10
21.2	Renormalizable ξ -Gauges	10
21.3	The Electroweak Theory	10
21.4	Dynamically Broken Local Symmetries*	10
21.5	Electroweak–Strong Unification	10
21.6	Superconductivity	10
	Appendix: General Unitarity Gauge	10
	Problems	10
	References	10

22 Anomalies	11
22.1 The π^0 Decay Problem	11
22.2 Transformation of the Measure: The Abelian Anomaly	11
22.3 Direct Calculation of Anomalies: The General Case	11
22.4 Anomaly-Free Gauge Theories	11
22.5 Massless Bound States*	11
22.6 Consistency Conditions	11
22.7 Anomalies and Goldstone Bosons	11
Problems	11
References	11
23 Extended Field Configurations	12
23.1 The Uses of Topology	12
23.2 Homotopy Groups	12
23.3 Monopoles	12
23.4 The Cartan-Maurer Integral Invariant	12
23.5 Instantons	12
23.6 The Theta Angle	12
23.7 Quantum Fluctuations around Extended Field Configurations	12
23.8 Vacuum Decay	12
Appendix A: Euclidean Path Integrals	12
Appendix B: A List of Homotopy Groups	12
Problems	12
References	12
Author Index	13
Subject Index	14

Preface to Volume II

Notation

15 Non-Abelian Gauge Theories

15.1 Gauge Invariance

15.2 Gauge Theory Lagrangians and Simple Lie Groups

15.3 Field Equations and Conservation Laws

15.4 Quantization

15.5 The De Witt–Faddeev–Popov Method

15.6 Ghosts

15.7 BRST Symmetry

15.8 Generalizations of BRST Symmetry*

15.9 The Batalin–Vilkovisky Formalism*

Appendix A A Theorem Regarding Lie Algebras

Appendix B The Cartan Catalog

Problems

References

16 External Field Methods

16.1 The Quantum Effective Action

16.2 Calculation of the Effective Potential

16.3 Energy Interpretation

16.4 Symmetries of the Effective Action

Problems

References

17 Renormalization of Gauge Theories

17.1 The Zinn–Justin Equation

17.2 Renormalization: Direct Analysis

17.3 Renormalization: General Gauge Theories^{*}

17.4 Background Field Gauge

17.5 A One–Loop Calculation in Background Field Gauge

Problems

References

18 Renormalization Group Methods

18.1 Where do the Large Logarithms Come From?

18.2 The Sliding Scale

18.3 Varieties of Asymptotic Behavior

18.4 Multiple Couplings and Mass Effects

18.5 Critical Phenomena*

18.6 Minimal Subtraction

18.7 Quantum Chromodynamics

18.8 Improved Perturbation Theory*

Problems

References

19 Spontaneously Broken Global Symmetries

19.1 Degenerate Vacua

19.2 Goldstone Bosons

19.3 Spontaneously Broken Approximate Symmetries

19.4 Pions as Goldstone Bosons

19.5 Effective Field Theories: Pions and Nucleons

19.6 Effective Field Theories: General Broken Symmetries

19.7 Effective Field Theories: $SU(3) \cdot SU(3)$

19.8 Anomalous Terms in Effective Field Theories^{*}

19.9 Unbroken Symmetries

19.10 The $U(1)$ Problem

Problems

References

20 Operator Product Expansions

20.1 The Expansion: Description and Derivation

20.2 Momentum Flow*

20.3 Renormalization Group Equations for Coefficient Functions

20.4 Symmetry Properties of Coefficient Functions

20.5 Spectral Function Sum Rules

20.6 Deep Inelastic Scattering

20.7 Renormalons*

Appendix Momentum Flow: The General Case

Problems

References

21 Spontaneously Broken Gauge Symmetries

21.1 Unitarity Gauge

21.2 Renormalizable ξ -Gauges

21.3 The Electroweak Theory

21.4 Dynamically Broken Local Symmetries^{*}

21.5 Electroweak–Strong Unification

21.6 Superconductivity

Appendix General Unitarity Gauge

Problems

References

22 Anomalies

22.1 The π^0 Decay Problem

22.2 Transformation of the Measure: The Abelian Anomaly

22.3 Direct Calculation of Anomalies: The General Case

22.4 Anomaly-Free Gauge Theories

22.5 Massless Bound States*

22.6 Consistency Conditions

22.7 Anomalies and Goldstone Bosons

Problems

References

23 Extended Field Configurations

23.1 The Uses of Topology

23.2 Homotopy Groups

23.3 Monopoles

23.4 The Cartan–Maurer Integral Invariant

23.5 Instantons

23.6 The Theta Angle

23.7 Quantum Fluctuations around Extended Field Configurations

23.8 Vacuum Decay

Appendix A Euclidean Path Integrals

Appendix B A List of Homotopy Groups

Problems
